Color paste

Product name: Polyether Color paste

Color: Black, white, red, yellow, blue, green, and so on.

Application:

Polyether Color paste as a hybrid material, it is used as the colorants of polyurethane foam material in the industry, especially suitable to the foaming.

Character:

tinting strength, easily to disperse, difficult to fade and good weathering resistance.

Composition:

Pigment, Polyurethane resin

Form: Muddy paste

Viscosity: <8000CPS±2000

Hydroxyl number: about 40

Dilution:

It can mix with the corresponding resin with any proportion, suggest proportion: 0.3—3%.

Volatile: <3% (104°C, 4hrs)

Storage and stability:

Stored in an airtight container at room temperature, remain stable at least one year. This color paste viscosity will increase, if it is exposed to low temperatures, after heated to a room temperature and even mixing, it returned to normal. After use, please cover will be good.
